

## 05 Owasp

### OWASP Top 10 Assessment — K\_NANOVLLM

**Company:** Anticloud FZ LLE **Standard:** OWASP Top 10 2021

# Category Mitigation Status

--- --- ---

A01 Broken Access Control Zero-trust mTLS: every call authenticated PASS  
A02 Cryptographic Failures AES-256-GCM at rest, TLS 1.3 in transit PASS  
A03 Injection Parameterized queries, no shell exec from user input PASS  
A04 Insecure Design Threat model documented, offline-first by design PASS  
A05 Security Misconfiguration Single binary: no misconfigurable cloud console PASS  
A06 Vulnerable Components SBOM embedded, deterministic builds, pinned deps PASS  
A07 Auth & Session Failures mTLS short-lived certs, no session tokens PASS  
A08 Software & Data Integrity AIOSS + Provenance chain on every mutation PASS  
A09 Security Logging Local observability: all events logged locally PASS  
A10 SSRF No outbound HTTP in offline mode, allowlist only PASS

### Additional: LLM Top 10 (OWASP LLM01-LLM10 2025)

# Category Mitigation Status

--- --- ---

LLM01 Prompt Injection Input sanitization + output validation PASS  
LLM02 Insecure Output Handling Structured output validator, schema enforcement PASS  
LLM03 Training Data Poisoning Model weights verified via hash, not retrained online PASS  
LLM04 Model Denial of Service Token budget enforced, request queuing PASS  
LLM05 Supply Chain Vulnerabilities SBOM, deterministic build, pinned GGUF hash PASS  
LLM06 Sensitive Info Disclosure Sovereign Memory encrypted, no plaintext logs of prompts PASS  
LLM07 Insecure Plugin Design No plugins; all tools compiled into single binary PASS  
LLM08 Excessive Agency PAX operates in read-only mode by default PASS  
LLM09 Overreliance Human-in-the-loop required for all write operations PASS  
LLM10 Model Theft Model runs locally; GGUF never transmitted externally PASS
